

Genuinely complete, accurate and contemporaneous records in a way that is easy, robust, featherlight and fully compliant with all the relevant regulations.

Master record keeping

If your consultations are important, include them on the record.

DAN brings completeness, accuracy and context to your consultation records.

Click, confirm, calm...

When it comes to clinical note-keeping, it doesn't get more complete, accurate or contemporaneous than a secure audio recording.

Capture what really happens, not just what you have time to write down.

Simple and secure

Every aspect of DAN is carefully designed for dentists, by dentists.

We understand and comply with every relevant aspect of the UK dental regulatory environment. Our data protection and security credentials exceed the compliance requirements of the ICO, GDPR, NHS DSPT and FGDP (CGDent).

Share the recording

Patients can listen again when they need to remember.

Help family and carers understand, value and support the patient and treatment decisions.

Wow your patient

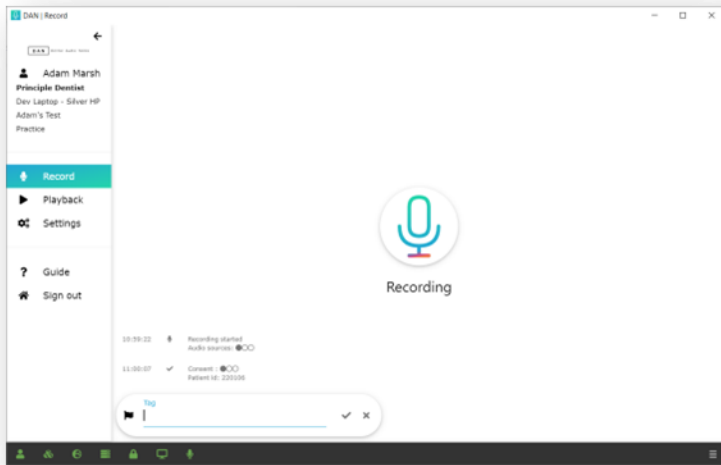

With no extra effort, just press record. Be at your best doing what you love. Then offer to share.

Move away from the keyboard and turn your consultations into uninterrupted, one-on-one time.

Love your team

By making the record-keeping process easier for everyone, DAN makes for happier, more productive clinics where teams can flourish.

What the experts say

"Not only does DAN capture what actually happened, rather than a post-facto version of what should have happened in an ideal world, it has the potential to do wonders for the quality of interpersonal communication between patient and clinician. That is arguably a more important dividend than the records themselves."

Security and Privacy

Dental audio records contain special category, personal, sensitive data and need to be managed with diligence and respect.

Not just a generic recording software

We understand and comply with every relevant aspect of the UK dental regulatory environment.

Our data protection and security credentials are fully compliant with the requirements of the ICO, GDPR, NHS DSPT and FGDP (CGDent).

Please note, Dental Audio Notes is not endorsed by these organisations

End-to-end encryption

End to end encryption keeps all data secure from the moment you press record. We can't decrypt your data, and no one else can either.

- Data is encrypted immediately, before it ever leaves your computer.
- Data is always encrypted in transit using HTTPS/TLS.
- Data always remains within the UK.
- Our systems are regularly penetration tested by CREST approved security experts.

Consent

Patients do need to grant consent for an audio recording. As with any aspect of their clinical record, patients are entitled to request a copy.

- Consent needs to be confirmed for the recording to be saved.
- Patients may revoke consent, and DAN makes this easy to do when requested.
- Patients have right to access and may request a copy of records. DAN provides access with a secure link.
- When consent expires or is revoked, DAN notifies you before removing the recording.

Storage

These audio recordings form part of the patient record.

- Encrypted recordings and data is stored on our servers, in the UK.
- Records are archived for 11 years.
- No personally-identifiable information of any of your patients is stored, so they remain completely anonymous to anyone but you and your team.
- Data stored on our servers are encrypted using AES-256 or greater, securing data at rest.

Pricing

Demo

Start using DAN, immediately

£0/month

(3hrs recording time, total)

Complete

For yourself, your team, per practice

Tiered, from £30/month

(includes 6hrs recording time, then £5/hr)

What do indemnity providers say?

(Dentists should reach out to their indemnity provider for an official response)

- Dental professionals who record consultations need to obtain consent before any recording is made.
- Once a recording has been made, it will form part of the patient records.
- Patients are entitled to have access to their recording.
- Making a recording does not replace the need to make a thorough written record.

How do I start?

- Sign up at dentalaudionotes.com
- Download DAN
- Plug in a mic
- Press record

Does DAN integrate with practice management software?

- DAN operates alongside, and independent of, any practice management system. DAN seamlessly manages all the storage, security, reliability and accessibility for you, and is therefore super-lightweight on your team, processes and IT infrastructure.

What should I record?

- Record your clinical and technical conversations with your patient. Teams that are confident using DAN seamlessly introduce and start DAN as the clinical discussion starts. They may start and stop DAN at various points throughout the appointment or leave it running.
